

How to Use This Book:

- 1) Find the page that has your **Application Rate**.
- 2) Choose the **column** that has your shooting width.
- 3) Find the truck speed (**FPM**) to match your pump gpm.
- 4) The color of the cell shows the proper nozzle.

Ex.) 16' of bar, using truck speed of 346 fpm, to obtain the 160 gpm pump speed, which has the yellow color code for the 3352205 nozzle. Note how this table reveals truck speeds ranging from 260 fpm to 415 fpm for this nozzle. **And**, you now can select a different FPM to determine the GPM and correct nozzle, as well. So, choosing, say, 398 fpm, gives 184 gpm.

Chart for: 0.26 gal./yd² ... 26 hundredths

		PUMP RATE, gpm									
		Spraybar Width, feet
